

PURSUIT CRANE

FULLY GYRO-STABILIZED, ROBOTIC CRANE
FLEXIBLE LENGTHS WITH QUICK CHANGES
MOUNTED ON 400 BHP VW TOUAREG V10

The flexibility of the Pursuit crane can be fully exploited in as little as 20 minutes from rolling off our own transporter. Unlike other systems, our unit comes complete with the 400 Bhp VW Touareg V10, Pursuit crane, monitors and intercom kit, the only thing left to do is decide on the arm length and install your chosen remote head and camera package. Can be used as a quick mobile crane or even a dolly over rough terrain rather than a fast tracking vehicle too. To complete the entire ready-to-roll package we can supply the Pursuit with our newest fully stabilised remote head, the Stab-C Compact.
